

DIRECTIONS

I Must Garden's Mole & Vole Repellent works by creating an undesirable environment for burrowing animals. It can be used both as a preventative measure against infestations as well as an effective repellent to move destructive animals off property.

Initial Treatment for Repelling:

Apply at a rate of 1 lb/500 sq. ft. Divide property into two or three sections working toward an exit point. Treat first section, water in. Treat second section 5 to 10 days later, treat third section 5 to 10 days after second treatment.

Thirty days from initial treatment, treat entire property with product at the rate of 1 lb/1000 sq. ft. Watering in after each application will hasten penetration of product into the soil. Maintain control by reapplication of product at the rate of 1 lb/1000 sq. ft. Depending on surrounding infestations, maintenance applications may be anywhere from 30 to 90 days.

Preventative Treatment:

Apply at a rate of 1 lb/1000 sq. ft. Reapply every 30-90 days depending on surrounding infestations. Watering in after application will hasten penetration of product into the soil.

Consider applying on a rainy day to save time and water!

ACTIVE INGREDIENTS:

Castor Oil 20.00%
Mint Oil75%
